Case No. 901 Unit:mm

Function Description

1.B+,B-

 $Connect \ the \ battery: B+ \ connected \ to \ battery \ positive.$

B- connected to battery negative.

2.L

Output voltage detection, detect output voltage or battery voltage (if battery is used).

	Voltage of L Pin		
AC OK	Output voltage +0.2~0.7V(depends on Vf of diode)		
AC Fail	0V		

3.+V,-V

Output voltage. Can't connect the battery.

4.CN2

Temperature sensor can be connected to the unit to allow temperature compensation of the charging voltage.

If the sensor is not used, the charger still works normally.

Reference example: (Under rated DC output voltage)

Connect 100K $_{\Omega}$ Thermistor(THINKING) on NTC. The output voltage will change along

with the temperature change. If the output voltage is adjusted other than the rated value by internal potential meter, please consult Meanwell for suitable value of Thermistor.
