1 Hardware Overview

Front Panel

Some common front panels:

LED/Wi-Fi Button

When the EAP is working in Standalone Mode and enabled with Wi-Fi Control, press the button to turn on/off both the Wi-Fi and LED. In the other cases, press the button to turn on/off the LED only.

LAN Port

A wired device can be connected to the LAN port via an Ethernet cable and access the network.

RESET

With the EAP powered on, press and hold the button for about 5 seconds until the LED flashes, then release the button. The EAP will restore to factory default settings.

LED Indicator

White On: Working normally/Initializing.

For EAPs with dual-color LED: Normal power supply

Orange On: For EAPs with dual-color LED: Low power supply

Off: Working abnormally/Power off/LED is turned off.

Flash:

- Flash twice: Initialization is completed.
- Flash once per second: The EAP is upgrading.
- Flash quickly: The EAP is resetting or the Omada Controller is locating the EAP*.

* When the Locate feature is activated in the Omada Controller, the EAP's LED will flash quickly for 10 minutes to help you locate and identify the device. You can disable this feature manually to stop the device from flashing.

- **Sustained flash:** The EAP is in isolated state.*

* Only for EAPs supporting Omada Mesh.

Rear Panel

UPLINK+PoE Port / ETH0 (PoE IN) Port

Connect to a PSE (Power Sourcing Equipment), such as a PoE switch, for both data transmission and power supply.

2 Pre-Installation Checklist

Before installation, be sure that you have the following items:

- A pre-installed wall junction box
- An RJ45 plug
- Screwdrivers
- A PoE switch

3 Hardware Installation

Note: For simplicity, we will take EAP230-Wall for example throughout the Guide.

The EAP can be mounted into a wall junction box. The junction box should be pre-installed with a running-in-wall Ethernet cable connected to a PoE switch.

Some common wall junction boxes:

86 mm wall junction box

Standard EU wall junction box

Standard US wall junction box

1. Detach the faceplate of the junction box with a screwdriver (demonstrated with an 86 mm wall junction box).

2. Detach the faceplate of the EAP with a screwdriver.

3. Connect the Ethernet cable inside the junction box to an RJ45 plug. Then connect the cable to the PoE port at the rear panel. Position the Ethernet cable to ensure it is not strained.

4. Insert the enclosed screws and tighten them with a screwdriver to secure the mounting bracket.

Note:

- Do not over tighten the screws.
- If the enclosed screws do not fit the junction box, use the screws attached to the junction box instead.

5. Press the faceplate of the EAP back into position.

4 Set Up

Choose a method to set up your EAPs:

• Method 1: Standalone Mode

Configure and manage EAPs separately (Convenient for a small network with only a few devices)

• Method 2: Controller Mode

Configure and manage EAPs in batches on a central platform, namely Omada Controller.

Method 1: Standalone Mode

If your network has only a few devices, you can configure and manage EAPs on their standalone pages.

Note: The EAP web page is inaccessible while the EAP is managed by a Controller.

Notes:

- Before you start, be sure to power up and connect your devices according to the topology figure.
- A DHCP server (typically a gateway/router with the DHCP function enabled) is required to assign IP addresses to the EAPs and clients in your local network.

Via Web Browser

1. Connect your device to the EAP by using the default SSIDs printed on the label of the product.
2. Launch a web browser and enter <https://tplinkeap.net> in the address bar. Use **admin** for both Username and Password to log in.

3. Set up a new Username and Password for secure management. Then you can configure the AP.

Via Omada App

1. Download and install the TP-Link Omada App from App Store or Google Play.

2. Connect your mobile device to the EAP by using the default SSIDs printed on the label of the product.
3. Launch the Omada App, go to the **Standalone Mode > EAPs** page, and wait for the EAP to appear. Tap on the EAP to configure it.

The Omada App is designed to help you quickly configure common settings. If you want to configure advanced settings, use the web page of your EAP.

Method 2: Controller Mode

Omada Controller integrates Omada gateways/routers, switches, access points, and more for centralized management.

Notes:

- A DHCP server (typically a gateway/router with the DHCP function enabled) is required to assign IP addresses to the EAPs and clients in your local network.
- The Omada Controller must have network access to your Omada devices (the gateways/routers, switches, and EAPs) in order to find, adopt, and manage them.

Via Web Browser

1. Get an Omada Controller ready.

• Option 1: Omada Hardware Controller

Obtain a Hardware Controller and refer to its Installation Guide to set it up.

• Option 2: Omada Software Controller

On a PC with Windows or Linux OS, download the Software Controller from <https://www.tp-link.com/support/download/omada-software-controller/>. Then run the file and follow the wizard to set up the Controller.

Note: To manage your devices, the Software Controller needs to keep running on your PC.

• Option 3: Omada Cloud-Based Controller

Go to the Omada Portal (<https://omada.tplinkcloud.com>) and log in with your TP-Link ID. Then click **+ Add Controller** to add a Cloud-Based Controller and set it up.

2. Launch the Controller, access your site, and go to the **Devices** page.
3. Now you can adopt and manage the EAPs.

Tip:

For the Omada Hardware/Software Controller, you are recommended to enable Cloud Access and bind it to your TP-Link ID. This enables you to remotely access and manage the Controller and Omada devices via Omada Portal (<https://omada.tplinkcloud.com>).

For detailed configurations, refer to the User Guide of the Controller at our official website: <https://www.tp-link.com/support/download/?type=smb>

Via Omada App

1. Download and install the TP-Link Omada App from App Store or Google Play.

2. Add the Controller with local access or cloud access.

• Local Access

Note: Local access applies to the Hardware Controller and Software Controller only.

- a. Connect your mobile device to the EAP by using the default SSIDs printed on the label of the product.
- b. Launch the Omada App and go to **Controller - Local Access**. Tap the **+** button on the upper-right corner to add the Controller.

• Cloud Access

- a. Launch the Omada App and go to **Controller - Cloud Access**.
- b. Log in with your TP-Link ID. A list of Controllers that have been bound with your TP-Link ID will appear.

3. Launch the Controller, access your site, and go to the **Devices** page.

4. Now you can adopt and manage the EAPs.

The Omada App is designed to help you quickly configure common settings. If you want to configure advanced settings, use the web page of your Controller.

Safety Information

- Keep the device away from water, fire, humidity or hot environments.
- Do not attempt to disassemble, repair, or modify the device. If you need service, please contact us.
- Do not use the device where wireless devices are not allowed.
- This equipment can be powered only by equipments that comply with Power Source Class 2 (PS2) or Limited Power Source(LPS) defined in the standard of IEC 62368-1.
- The PoE ports shall not be used to charge lithium batteries or devices supplied by lithium batteries.

EU Declaration of Conformity

TP-Link hereby declares that the device is in compliance with the essential requirements and other relevant provisions of directives 2014/53/EU, 2011/65/EU and (EU) 2015/863.

The original EU Declaration of Conformity may be found at <https://www.tp-link.com/en/support/ce/>

UK Declaration of Conformity

TP-Link hereby declares that the device is in compliance with the essential requirements and other relevant provisions of the Radio Equipment Regulations 2017.

The original UK Declaration of Conformity may be found at <https://www.tp-link.com/support/ukca/>

For detailed configurations, refer to the user guides of the controller and EAPs. The guides can be found on the download center of our official website: <https://www.tp-link.com/support/download/?type=smb>.
